WOHNHAUS IN KÖLN-LINDENTHAL

mit Gussterrazzo von VIA
with cast terrazzo by VIA

Entwurf · Design Umbau: Catalanoquiel, Köln; Architektur 1950er-Jahre: Hans Schilling

Fußwarm: fein strukturierter Terrazzo mit Fußbodenheizung · Finely textured terrazzo with underfloor heating

Sakrale Anmutung: Glasfenster von Friedrich Hans „Fritz“ Lauten · Glass windows by Friedrich Hans "Fritz" Lauten

Fotos: Eugenio D' Catalano und Timo Stürmer

Architect and church builder Hans Schilling (1921-2009) realised in the 1950s also this multi-family home in Cologne-Lindenthal. Catalanoquiel refurbished this exemplar of post-war architecture. The Cologne-based architects describe the home's atmosphere as sacred, owing to its spatial proportions and materiality. Coloured windows in the living area, created by artist and glass painter Friedrich Hans "Fritz" Lauten, are reminiscent of traditional leaded church windows. A delicate spiral staircase made of folded sheet steel was added, leading up to the gallery in the six-metre-high living room. The client herself grew up in this house, making it a priority to preserve its original character. The new underfloor heating and a more open-plan layout made it necessary to replace the natural stone floor with homogeneous VIA Terrazzo N° T02160. In terms of colour, materiality and quality, this cast terrazzo pays a worthy tribute to the original flooring.

Architect and church builder Hans Schilling (1921-2009) also realised this multi-family home in Cologne-Lindenthal in the 1950s. Last year, Catalanoquiel refurbished this exemplar of post-war architecture. The Cologne-based architects describe the home's atmosphere as sacred, owing to its spatial proportions and materiality. Coloured windows in the living area, created by artist and glass painter Friedrich Hans "Fritz" Lauten, are reminiscent of traditional leaded church windows.
